PROFESSIONAL
WATER TREATMENT
SOLUTIONS

Why do I need a **water softener**?

Hard water contains too much calcium. A water softener takes the limescale out of the water, enabling you to enjoy all the benefits of soft water:

Without limescale, your household appliances will continue to **work efficiently**.

Detergents foam incredibly quickly and easily, so you **need much less**

Healthy **lustrous hair** that shines like never before.

The flavours of coffee and tea are fully appreciated with the **tastier** soft **water**

You enjoy your **clothes** for longer because they come out of the washing machine **softer, cleaner** and without discolouration.

Why should I choose a **North Star** water softener?

North Star water softeners meet everyone's needs, whether for private or professional use. Compared with other water softeners, North Star water softeners use up to 50% less salt and up to 65% less water to regenerate.

Thanks to our many years' experience, our water softeners are legendarily strong and exceptionally durable.

Skin that feels **softer** and more relaxed.

You have to **clean less**. Without limescale, the bathroom and kitchen look as good as new.

Wrap your children in **velvety-soft bath towels!**

Extend the **life** of your heating system.

Soft water from your tap every day

The soft water from your North Star water softener ensures your daily comfort. Thanks to its economy and exceptional durability, you can relax and enjoy your North Star.

Economical and efficient

Compact models with unprecedented flow rates, minimal salt and water consumption.

Patented control module

Optimal use of the available capacity.

Safe and reliable

The dry salt container and self-cleaning manifolds ensure consistent operation.

Durable

A solid salt tank and high-quality resins in a multi-wrap resin tank, for maximum durability.

Great-tasting water straight from your tap

The North Star Hybrid links a water softener to a drinking water filter. Hybrid technology combines softening resins with an activated carbon filtration, enabling the Hybrid to remove limescale and filter drinking water.

Removal of limescale

The Hybrid is an efficient water softener.

Filtration of pesticides, herbicides and drug residues

Thanks to the activated carbon, you can drink tap water without worries.

Removal of bad chlorine taste

The activated carbon filters out all the chlorine taste from the water.

Better for the environment

Do your bit by not buying bottled water!

Which model of water softener do I need?

We consciously opted for a wide range of water softeners. Small families of 1 or 2 people as well as larger families and even small businesses such as bakers and hairdressers can always find the perfect appliance with us.
